

LI-RADS Score for CT/MRI - Final Report

Patient Information

Identification Data

HRN: LIR00000002
ID Card: Unknown

Personal Data

Gender: Female
Age: 72

Masses

Findings: Yes, Masslike
Diameter (mm): 24
Arterial Phase: Hyperenhancement
Venous Phase: Hypoenhancement
Late Phase: Hypoenhancement
Caps. Enhan. Arterial Phase: No
Caps. Enhan. Venous Phase: Yes
Caps. Enhan. Late Phase: Yes
Growth: Less than 10 mm per year
Tumor in Vein: No
Disappearance w/out Tx: Unknown

Auxiliary Features

Corona Highlight: Yes
Stability for 2 Years: No
Diffusion Restriction: No
Intralesional Fat: Yes
Lesional Fat Sparing: No
Lesional Iron Sparing: No
Mild T2 Hypersensitivity: No
Mosaic Appearance: No
Nodule-in-Nodule Appe.: No

CT/MRI Realization

Date: 25-02-2017

Outcome

Results

According to CT Scan/Magnetic Resonance Image (MRI) Information, there is a HIGH RISK (LI-RADS Score = 5) of having LIVER CANCER.

Conclusions

WE SUGGEST DEFINITELY HEPATOCELLULAR CARCINOMA, PURSUANT TO THE LIVER IMAGING REPORT AND DATABASE SYSTEM (LI-RADS).

This report has been generated from the data entered on 26-02-2017 12:16:56 UTC/GMT.

Disclaimer

Bioprognos has not developed the Liver Imaging Report and Database System (LI-RADS). LI-RADS was developed in 2011 by the American College of Radiology (ACR) as a method to help in radiology findings classification. Its mission is to standardize the terminology and the systematic for the radiological report, categorize injury by establishing a degree of suspicion, as well as assign the attitude that should be taken in each case. Bioprognos has implemented it for training or educational purposes only. You assume total responsibility for your use.
